Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE; 9606718.
HAHN M., PONS J., PLANAS A., QUEROL E., HEINEMANN U.;
"Crystal structure of Bacilius licheniformis 1,3-1,4-beta-D-glucan 4-glucanohydrolase at 1.8-h resolution.";
FEBS LETT 374:221-224(1995)
-1- CATLVITC ACTIVITY: HYDROLYSIO FI 1,4-BETA-D-GLYCOSIDIC LINKAGES
-1- CATLVITC ACTIVITY: HYDROLYSIO FI 1,4-BETA-D-GLYCOSIDIC LINKAGES
-1- BETA-GLUCANS CONTAINING 1,3- AND 1,4-BONDS.
-1- BETA-GLUCANSES OF BACILLUS HAVE A SUBSTRATE RANGE SIMILAR TO
LICHENASE OF GERMINATING BARLEY.
-1- SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
*Essential catalytic role of Glu134 in endo-beta-1,3-1,4-D-glucan 4-glucanohydrolase from B. licheniformis as determined by site-directed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0.2% OF WILD-TYPE ACTIVITY.

Mean 37.991; Variance 71.901; scale 0.528 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Vectors for expression of polypeptide(s) in Bacillus - contg. promoter and regulatory regions which control expression and secretion of protease(s) in Bacillus.

Disclosure: p: English.
Claimed replicon comprises a promoter and regulatory regions, capable of expressing alkaline and neutral protease genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä
                                                                                                                                                                                                                                                             Hepatitis E virus hollow particle poly:peptide(s) and nucleic acids encoding it - useful for more accurate detection of HEV in samples, using immuno-assays and nucleic acid hybridisation
Claim 10; Page 17-24; 29pp; Japanese.

This sequence represents a Hepatitis E viral hollow particle protein. This sequence represents a Hepatitis E viral hollow particle protein. This polypeptides can be used to raise antibodies to detect HEV infection in samples, e.g. by immuno-assay based techniques, and the nucleic acid can be used for the same in nucleic acid hybridisation assays. The polypeptides and nucleic acids allow more accurate detection of HEV than previously possible.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        572 frtsfvdgavleangperynlsfdasgstmaagpfsptyaasaaglevryvaagldhrav 631

malonate; malonic acid; wine; malolactic fermentation;
deacidification; yeast; Saccharomyces cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Replicable plasmidic expression vector - for transformation of Bacillus to direct expression of poly:peptide
Disclosure; Fig 4: 37pp; English.
The inventors claim a vector comprising a replicable plasmid containing the promoter and regulatory region of a gene selected from apr[Bamp] and npr[Bamp], for transformation of Bacillus to direct expression of polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       291

Claim 9: Fig 1A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Recombinant plasmid used in beer prodn. - obtd. by integrating lichenase gene derived from Bacillus subtilis, into vector bisclosure; Fig 4: 7pp: Japanese.
The lichenase gene from Bacillus subtilis Y-25 is used for transforming Bacillus hosts so that they show increased lichenase expression. The recombinant lichenase enzyme produced by the transformants is useful in beer production for decomposing beta-

The enzyme is constitutively expressed. It provides a simple and relatively inexpensive means of removing candate, during or after alcoholic fermentation. Recombinant saccharomyces cerevisiae strains expressing the S. pombe malate permease are able to degrade malate, partic, that present in wine must, thereby removing excess acidity from the wine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Schizosaccharomyces pombe; mael; recombinant plasmid; yeast; Lactobacillus lactis; mleS; selectable marker; integrate; P450-14DM; C14 lanosterol dimethylase; degradation; malic acid; growth medium; deacidify; fruit; vegetable juice; Saccharomyces cerevisiae; alcoholic fermentation; wine-making.
Schizosaccharomyces pombe.

New insecticidal Bacillus thuringiensis toxins - useful for controlling legidopteran pests, especially Ostrinia nubilalis, Heliothis virescens and Heliocverpa zea Claim 14; Pages 28-30; 50pp; English.
This is the amino acid sequence of a novel Bacillus thuringiensis toxin used in the method of the invention, to control legidopteran pests. The new toxins are useful as pesticides, especially for the control of Ostrinia nubilalis, Heliothis virescens, and Helicoverpa zea. The polynucleotide coding sequences are useful for recombinant expression of the toxins and the primers, together with probes derived from the new sequences, are useful for the identification and characterisation of novel genes that encode pesticidal toxins.
                                                                Amino acid sequence of lepidoteran-active HD573 toxin.
HD573 toxin: PCR: primer: amplification; Bacillus thuringlensis; probe; lepidoptera: pest; pesticide: Ostrinia nubilalis; Heliothis virescens; Helicoverpa zea; hybridisation.
Bacillus thuringiensis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  502 fisekygnggdslrfelsnttarytlrgngnsynlylrvssigsstirvtingrvytanv 561

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New thermostable (1,3-1,4)-beta-glucanase - prepd. using hybrid gene obtd. using Bacillus amyloliquefaciens and B.macerans genes Disclosure: page 26; 84pp: English.
This hybrid protein is encoded by the beta-glucanase-H1 gene. Following processing of the signal peptide the mature protein is produced, comprising the amino terminus of the amylolique-faciens beta-glucanase and the carboxyl-terminal half of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /label-amino terminal of beta-amyloliquefaciens

New hepatitis E virus DNA from Pakistani strain SAR-55 - used for,

e.g. developing products for diagnosis of, and vaccination against

PT New hepatitis E virus infection

Disclosure: Pages 11-15: 204pp; English.

Disclosure: Pages 11-15: 204pp; English.

CC This represents a hepatitis E virus (HEV) open reading frame (ORF)-1

CC This represents a DNA sequence designated SAR-55. SAR-55 also encodes

CC This recombinant expression vector containing the SAR-55 nucleic acid

CC An be used to produce the HEV proteins, especially ORF-2 protein. The

C recombinant HEV proteins can be used as diagnostic agents and as vaccines

Cf or use against HEV infection. The detection and diseases caused by

CC HEV can be used for the diagnosis of infection and diseases. Such methods are

CC HEV and for monitoring the progression of such disease. Such methods are

CC COURSE of treatment of HEV infection and disease in a mammal. The

CC COURSE of treatment of HEV infection on disease in a mammal. The

Hepatitis E virus; HEV; SAR-55; diagnostic agent; vaccine; antibody;
passive immunisation; open reading frame; ORF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
nd______ beta-glucanase. This hybrid protein is thermostable and hydrolyses beta-glycosidic linkages in (1,3-1,4)-beta-glucans. Reducing sugars are obtd. at high temps. and thus this enzyme can be used in the mir. of food prods., esp. beer and animal feed (eg for feeding poultry). See also Q05833.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          74 laltspsynkfdcgenrsvqtygyglyevrm-kpakntgivssfftytgptegtp 127

The sequences given in R51264-66 are encoded by the hepatitis E virus (HEV) strain SAR-55. The cDNA sequence contains three open reading
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        production the virus proteins - useful for diagnosis or vaccine production the virus proteins - useful for diagnosis or vaccine claim 22; columns 57-66; 47pp; English.

Wally 29 are encoded by the genome of the Burma strain of enterically transmitted non A non B hepatitis virus (ET-NANB) (hepatitis E virus (HEV)). The specification describes an isolated protein which is specifically immunoreactive with antibodies present in individuals infected with HEV and encoded by a sequence contained in an open reading frame (ORF) of an HEV genome. The genome has a sequence that is more than 70% identical to the ORFI sequence from ED-NANB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           572 frtsfydgavletngperhnlsfdasgstmaagpfsltyaasaaglevryvaagldhrav 631

frames (ORFs). These proteins can be used to stimulate the production of protective antibodies upon injection into a mammal that would serve to protect the mammal upon challenge with wild type HEV. The proteins can be used for detection and diagnosis of HEV infection. The Proteins SAR-S5 CDNA was isolated from primates innoculated with stool suspensions obtained from hepatitis E patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    W71209-11 represent the proteins encoded by the open reading frames (ORFs) of the DNA sequence of the Burmese isolate of an enterically transmitted nonAhonB viral hepatitis agent (ET-NAMB). The nucleic acid sequence may be used for identifying and sequencing the entire viral agent (also referred to as HEV), detecting ET-NANB in infected samples, e.g. by specific amplification of virus-derived DNA sequences and for producing recombinant viral proteins for use in
                                                                                                                                                                                                                                                                                                                         572 frtsfydgayletngperhnlsfdasqstmaagpfsltyaasaaglevryvaagldhray 631

                                                                                                                                                                                                                                                                                                                                                                                                                                                      The protein useful in diagnosis, prophylaxis and treatment of antigenic protein useful in diagnosis, prophylaxis and treatment of antigenic protein useful in diagnosis, prophylaxis and treatment of protein the interesting in the present sequence is the protein prod. of ORF-1 from the present sequence is the protein prod. of ORF-1 from the retrieves (E.G. Protein Protein Protein Protein prod. of ORF-1 from the contentically transmitted non-A. non-B hepatitis in Pakistan. The protein encoded by the structural region of the virus (i.e. ORF-2), which is capable of forming HEV like particles, is useful for the detection of HEV antibodies (pref. IgG or IgM) in blood, plasma, sera, cerebrospinal fluid, tissue, urine or pleural fluid. The protein, and anti-HEV antibodies generated using the protein, can also be used in vaccines for immunising an animal against HEV infection. The protein is identified as a band of greater than the NORF-2 contg. baculovirus, i.e. the claimed recombinant expression vectors ppic9-1779, -1780 and -1781.

Microbiology (1995) 141:281-290
Genese encoding xylan and beta-glucan hydrolysing enzymes in
Bacillus subtilis: characterization, mapping and
construction of strains deficient in lichenase, cellulase
RNA-dependent RNA polymerase and an ATP/GTP binding site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -1- COFACTOR: BINDS AND REQUIRES A ZINC ATOM, WHICH IS ESSENTIAL FOR PROTECLYIC ACTIVITY. BINDS FOUR CALCIUM IONS (BY SIMILARITY).
-1- SUBCELLULAR LOCATION: SECRETED.
-1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M4 (ZINC METALLOPROTEASE); ALSO KNOWN AS THE THERMOLYSIN SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                      572 FRISFVDGAVLEANGPERYNLSFDASQSTMAAGPFSLTYAASAAGLEVRYVAAGLDHRAV 631
